

DIGITAL TUNE-UP

MAXIMIZE YOUR DIGITAL POTENTIAL.

We optimize your system's performance with the latest updates and ensure it stays that way, delivering solutions with long-term value.

\$5K

USER-INTERFACE TUNE-UP

- + **Recommend New Features**
Ensure your system is up to date with the newest Appian software and utilizing the latest features.
- + **Match Design to Your Corporate Brand**
Update layout and design to be on brand and ensure it's using the latest Appian design methods.
- + **Navigation Assistance**
Stop hopping between apps and tie them all together in one centralized design.
- + **Multi-Purpose Solutions**
All work performed is open source and can be re-applied and re-used across other apps and interfaces within the organization.

\$5K

PERFORMANCE TUNE-UP

- + **Automatic Health Checks**
Analyze your system and get health checks to run automatically to identify areas that are:
 - » Running too slow
 - » Using too much memory
 - » Designed outside of Appian best practices
- + **Target Poorly Performing Areas**
Isolate problems within interfaces, records, reports, or processes and identify their root cause.
- + **Speed Up Your Database**
Analyze your database or data model to optimize speed and performance.

\$5K

SECURITY AUDIT

- + **Appian Group Security**
Audit User and Group setup to ensure use of proper security levels.
- + **LDAP and SSO Security**
Confirm that alternative sign-on methods are secure and users are assigned to proper groups.
- + **Application Security**
Ensure proper Group-based security is used on Applications.
- + **Web API and Integration Security**
Verify that external access through WebAPI follows best security practices.
Check that integration access to external systems are restricted to appropriate groups.
- + **Dev-ops and Production Access**
Ensure best practices are followed for access to higher environments.
